PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 12 years of professional experience and 5+ years specializing in distributed systems and cloud-native architecture. Proven track record of architecting high-scale platforms handling 10M+ daily transactions with 99.99% uptime and reducing p99 latency by 40%. Led a full monolith-to-microservices migration across 15 AWS services, scaling to 50M daily users while cutting \$500K in costs and increasing deployment frequency 10x. Experienced team leader managing 8+ engineers across multiple product lines, delivering \$2M+ in infrastructure savings. Strong full-stack foundation in Java, Spring Boot, Kafka, Cassandra, Redis, and AWS with deep expertise in scalable system design, REST APIs, and async event-driven architectures.

WORK EXPERIENCE

Senior Software Engineer — TechCorp (2020 - Present) | San Francisco, CA

- Lead a cross-functional team of 8 developers across 3 product lines, delivering scalable distributed systems on AWS
- Architected and maintained systems handling 10M+ daily transactions with 99.99% uptime SLA
- Reduced p99 latency by 40% by redesigning 12 microservices and implementing async processing patterns
- Led migration from monolith to 15 AWS microservices, scaling platform to 50M daily users
- Cut infrastructure costs by \$500K annually and increased deployment frequency by 10x
- Mentored 3 junior engineers and drove 5 major project deliveries totaling \$2M in infrastructure savings

Senior Software Engineer — DataCo (2014 - 2020) | City, State

- Architected distributed systems processing 10M+ daily transactions with 99.99% uptime on AWS infrastructure
- Redesigning 12 microservices and implemented Kafka-based async processing patterns, reducing p99 latency by 40%
- Led a team of 6 engineers (including 2 offshore) to deliver 5 major projects, achieving \$2M in infrastructure savings
- Built core platform using Java, Spring Boot, Kafka, Cassandra, and Redis deployed on AWS
- Mentored 3 junior engineers on distributed systems design, Java/Spring Boot best practices, and cloud architecture

CORE SKILLS & TECHNOLOGIES

Java, Spring Boot, Apache Kafka, Cassandra, Redis, AWS, Distributed Systems, Cloud Architecture, Microservices, REST APIs, Async Event-Driven Architecture, System Design, Performance Optimization, Docker, Kubernetes, CI/CD, Team Leadership, Mentoring, Agile/Scrum, Cross-functional Collaboration

KEY PROJECTS

Monolith to AWS Microservices Migration (Java, Spring Boot, Apache Kafka, AWS, Docker, Kubernetes, Cassandra, Redis)

Led the architectural overhaul of a legacy monolithic application into a modern, containerized microservices platform deployed on AWS. Designed async event-driven communication patterns using Kafka to enable horizontal scalability and rapid independent deployments.

High-Throughput Transaction Processing Platform (Java, Spring Boot, Kafka, Cassandra, Redis, AWS)

Designed and built a distributed, low-latency transaction processing system with async processing patterns and event-driven architecture, enabling real-time processing at massive scale.

EDUCATION

Bachelor of Science in Computer Science — State University (2012)
