PROFESSIONAL SUMMARY

Results-driven Senior Software Engineer with proven expertise in designing high-scale, cloud-native distributed systems handling 50M+ daily requests. Specialized in Java/Spring microservices, Kubernetes orchestration, and AWS infrastructure with a track record of delivering 99.99% uptime, 45% latency reductions, and \$2.1M+ annual cost savings. Experienced technical leader managing cross-functional engineering teams and large-scale production environments.

WORK EXPERIENCE

Senior Software Engineer — *TechCorp* (2022 - Present)

- Lead a team of 8 engineers, providing technical direction, mentorship, and architectural guidance across multiple product lines.
- Manage \$2.3M in annual cloud infrastructure spend, implementing cost optimization strategies that reduced compute costs by \$180K monthly (\$2.1M annually).
- Rightsized 400 EC2 instances and orchestrated migration to Kubernetes, reducing infrastructure overhead while improving scalability and resilience.
- Optimized 2,300+ database queries, significantly improving application performance and reducing database load.
- Architected and operate 400+ node Amazon EKS clusters across 3 regions, maintaining 99.99% uptime and processing 50M+ daily requests with zero-downtime deployments.

Tech Lead — *StartupX* (2020 - 2022)

- Led engineering initiatives that drove 400% company growth, scaling the platform to support 2M users.
- Architected cloud-native infrastructure on AWS, reducing operational costs by 35% through rightsizing, Kubernetes adoption, and database query optimization.
- Built and maintained production systems supporting 2M users with high availability and performance standards.

Software Engineer — *BigTechCo* (2018 - 2020)

- Architected Java/Spring Boot microservices handling 50M daily requests on AWS, integrated with Apache Kafka for event-driven processing.
- Slashed API latency by 45% (P99) by implementing Redis caching (reducing database load by 60%) and asynchronous Kafka processing pipelines.
- Tuned JVM garbage collection parameters, reducing GC pause times by 50ms and improving overall application responsiveness.
- Maintained 99.99% uptime SLA for mission-critical services serving 50M users across global regions.

CORE SKILLS & TECHNOLOGIES

Java, Spring Boot, Kubernetes, Amazon EKS, AWS, Apache Kafka, Redis, PostgreSQL, Microservices Architecture, Distributed Systems, JVM Tuning, EC2, Cloud Infrastructure, Database Optimization, Zero-Downtime Deployments, High-Availability Systems, Performance Optimization, Cost Optimization, Technical Leadership, Team Management

KEY PROJECTS

Open-Source Kubernetes Operator

Production-grade Kubernetes operator published as open-source, amassing 3,500+ GitHub stars, 100,000+ downloads, and an active community of 15 contributors. Demonstrates expertise in Kubernetes API patterns, Go development, and cloud-native ecosystem contributions.

Lean-Stack SaaS Platform

Indie side-project SaaS application serving 25,000 monthly active users (MAU) on a lean \$50/month infrastructure footprint. Showcases cost-efficient architecture, DevOps automation, and product engineering skills.
