PROFESSIONAL SUMMARY

Senior Software Engineer with 12 years of experience and 7 years of deep specialization in distributed systems and microservices architecture. Proven track record of architecting and scaling event-driven platforms processing 500M+ daily events at 99.99% SLA compliance. Expert in backend optimization, having reduced p99 latency by 85% and saved \$500K annually in infrastructure costs. Adept leader managing cross-functional engineering teams and resolving mission-critical reliability challenges that protect millions in daily revenue.

WORK EXPERIENCE

Senior Software Engineer (Backend Team Lead) — *CloudScale Technologies* (Present)

- Architected event-driven microservices on AWS EKS, processing 500M+ daily events with 99.99% SLA compliance.
- Lead and mentor a backend engineering team of 8, driving technical direction and delivery excellence.
- Designed and operated Apache Kafka on AWS MSK across 12 brokers, achieving exactly-once semantics and sub-50ms p99 latency.
- Resolved transaction coordinator timeouts during 5x traffic spikes, cutting failure rate by 92% and protecting \$3M in daily revenue.

Senior Backend Engineer — *DataStream Inc.* (5 years tenure)

- Optimized Java microservices handling 2M+ daily transactions with a focus on high-throughput backend reliability.
- Reduced p99 latency by 85% (from 900ms to 130ms) through PostgreSQL query tuning, saving \$500K annually in infrastructure costs.
- Implemented strategic composite indexing on 47 hot tables and deployed Redis caching to drive performance gains at scale.

CORE SKILLS & TECHNOLOGIES

Distributed Systems, Microservices Architecture, Event-Driven Architecture, Apache Kafka, AWS MSK, AWS EKS, Java, PostgreSQL, Redis, Backend Engineering, High-Throughput Systems, Exactly-Once Semantics, Database Optimization, Performance Tuning, SLA Management, Team Leadership, Scalability, Low-Latency Systems

KEY PROJECTS

Event-Driven Microservices Platform (CloudScale): Architected an event-driven microservices platform on AWS EKS using Apache Kafka on AWS MSK, processing 500M+ daily events across 12 brokers with exactly-once semantics and sub-50ms p99 latency.

PostgreSQL Performance Optimization Initiative (DataStream): Led database optimization initiative combining composite indexing across 47 hot tables and Redis caching, achieving an 85% p99 latency reduction (900ms to 130ms) and \$500K annual infrastructure savings.

Transaction Coordinator Reliability Overhaul (CloudScale): Diagnosed and resolved transaction coordinator timeouts during 5x traffic spikes, cutting failure rate by 92% and protecting \$3M in daily revenue.
